

To do before next session

1 - Read those **articles**

- [W3Schools - HTML Basic](#)

2 - Watch those **videos**

- [Ninja-1 Introduction](#)
- [Ninja-2 HTML Elements syntax](#)

3 - Answer to following 3 questions

Q1 - What is the purpose of bellow tag in an HTML document?

`<!DOCTYPE html>`, `<html>`, `<head>`, and `<body>` tags

Q2 - Create an HTML document that includes

- A heading (`<h1>`)
- A paragraph (`<p>`)
- An unordered list (`<ul>`) with at three items
- An image (`<img>`)

Note : Include a brief description of what each tag does and why it is used.

Q3 - What is the difference between **absolute** and **relative** paths in HTML?

Note : Provide an example of each using the `<a>` tag to link to a webpage and to link to another file

You will need to present your work next session

WEB DESIGN

W2-S1 – Anatomy of HTML elements

Course Objectives

- ✓ Understand the **basic HTML** syntax
 - Recognize the **structure of a HTML** document
 - Identify the purpose of the `<!DOCTYPE html>` `<head>` and `<body>`
- ✓ Manipulate **basic HTML tags**: P, H1, UL, OL, A, IMG
- ✓ Differentiate **absolute** and **relative** paths

10 MIN

Homework Review

Q1 - What is the purpose of bellow tag in an HTML document?

<!DOCTYPE html>, <html>, <head>, and <body> tags

Q2 - Create an HTML document that includes

- A heading (<h1>)
- A paragraph (<p>)
- An unordered list () with at three items
- An image ()

Note : Include a brief description of what each tag does and why it is used.

Q3 - What is the difference between **absolute** and **relative** paths ?

Share your work in groups - Some group will present their outcomes

Overview of a basic HTML page

- ✓ [Open this page](#) and display the source code (chrome dev tools)
- ✓ Match each HTML element with its rendering on the page

Exploring Khmer Culture

The Khmer culture, originating from Cambodia, is rich in history and tradition.

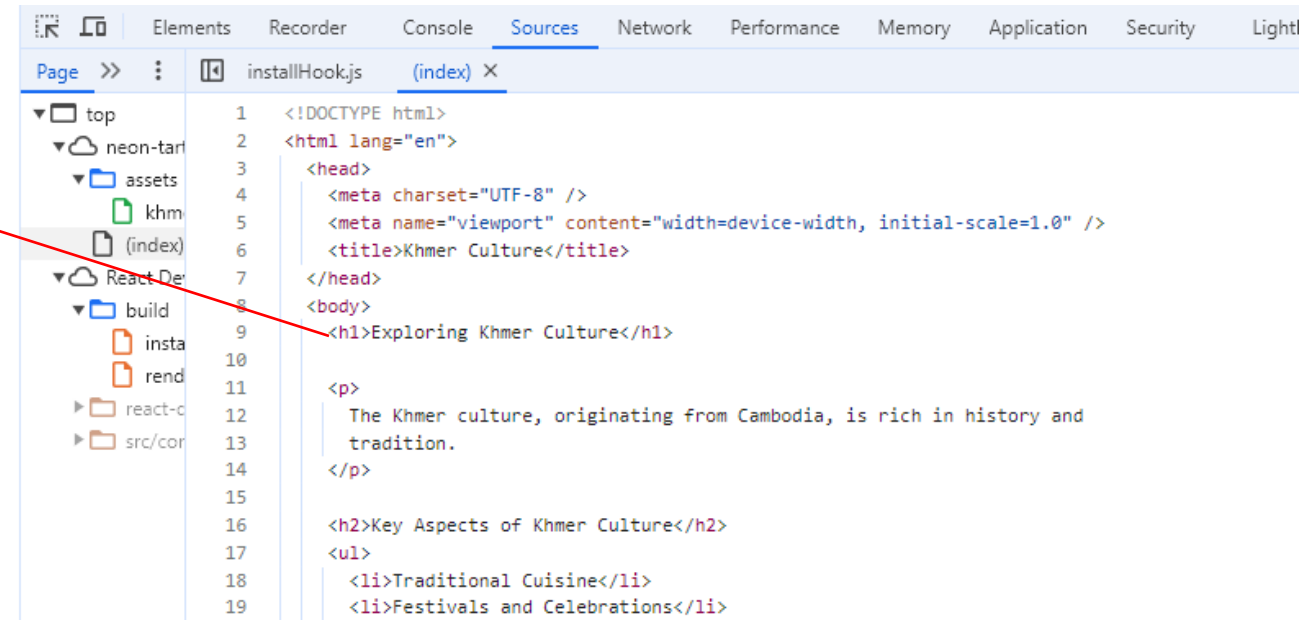

Key Aspects of Khmer Culture

- Traditional Cuisine
- Festivals and Celebrations
- Art and Architecture
 1. Angkor Wat - A magnificent temple complex and a symbol of Khmer architectural brilliance.
 2. Khmer New Year - A major festival marking the start of the new year with traditional dances and ceremonies.
 3. Traditional Dance - Includes classical performances such as the Apsara dance, which is deeply rooted in Khmer tradition.

To learn more about Khmer culture, you can visit the [Wikipedia page on Cambodian culture](#) for an in-depth overview.

Photo credit: [Example Photo Credit](#)

```
1 <!DOCTYPE html>
2 <html lang="en">
3   <head>
4     <meta charset="UTF-8" />
5     <meta name="viewport" content="width=device-width, initial-scale=1.0" />
6     <title>Khmer Culture</title>
7   </head>
8   <body>
9     <h1>Exploring Khmer Culture</h1>
10
11     <p>
12       The Khmer culture, originating from Cambodia, is rich in history and
13       tradition.
14     </p>
15
16     <h2>Key Aspects of Khmer Culture</h2>
17     <ul>
18       <li>Traditional Cuisine</li>
19       <li>Festivals and Celebrations</li>
```

HTML = Hyper Text Markup Language

- ✓ HTML is the standard **markup language** for Web pages
- ✓ HTML files can be read by web browsers (*chrome, Firefox...*)

HTML documents
Starts with this tag

```
<!DOCTYPE html>
<html>
<body>

<h1>Welcome!</h1>
<p>How are you?</p>

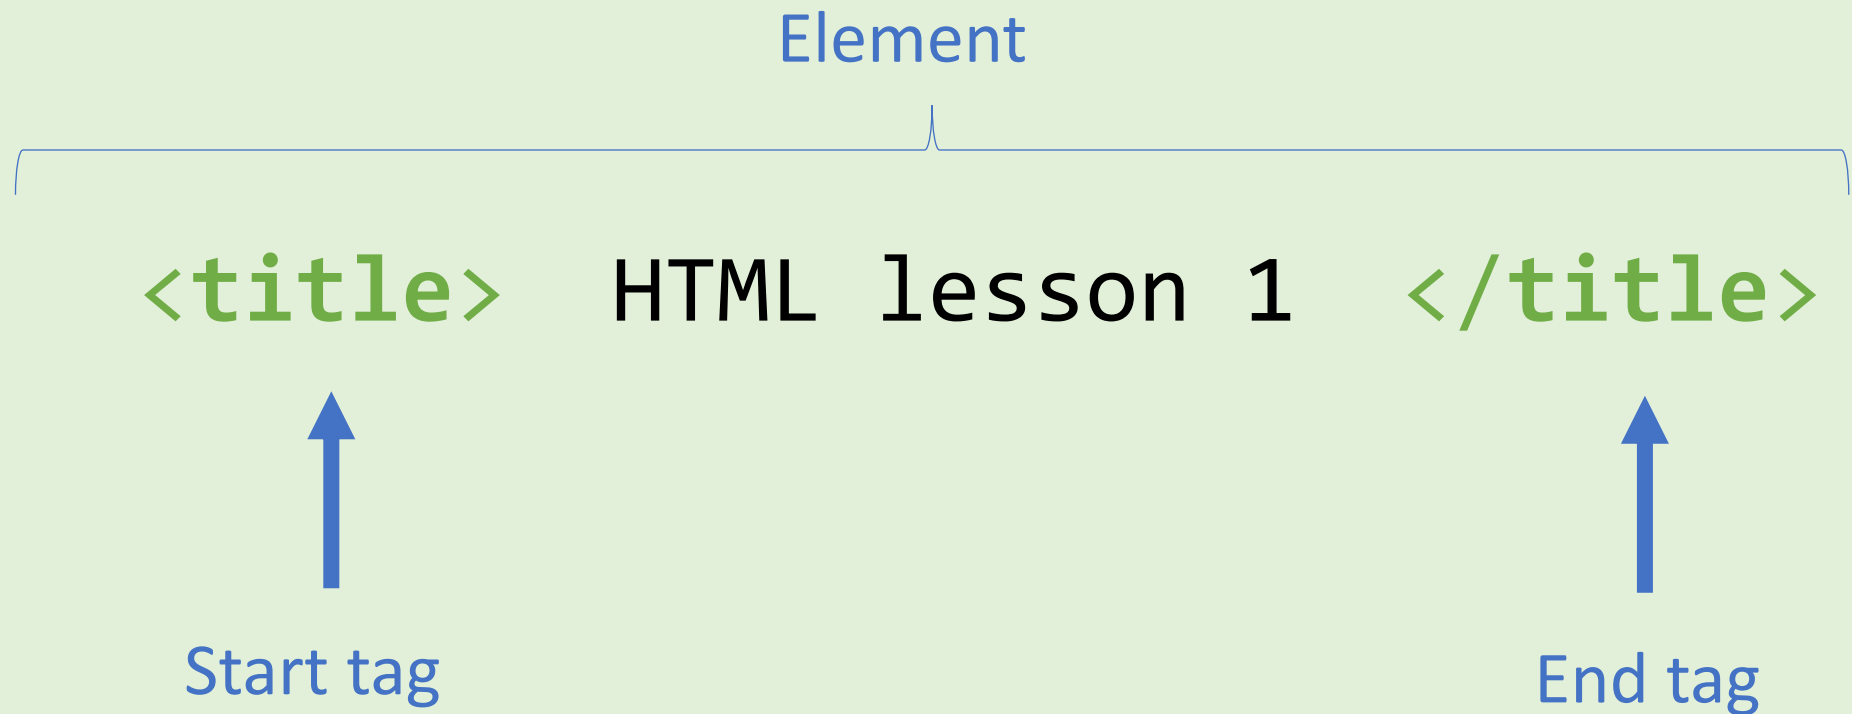

</body>
</html>
```

Welcome!
How are you?

HTML Elements

- ✓ An HTML element is an **individual component** of an HTML document.
- ✓ Most HTML elements are written with a **start** tag and an **end** tag

HTML Head Elements

- ✓ HTML pages are composed of a **head** and a **body**
- ✓ **Head** contains metadata
- ✓ Metadata is not displayed on the page but used by browsers and by search engines.

The diagram illustrates the structure of an HTML document. It shows the `<!DOCTYPE html>` and `<html lang="en">` declarations at the top. Below these, the `<head>` section is enclosed in a blue bracket and labeled "HEAD". Inside the head, there is a `<meta charset="UTF-8" />` tag, which is pointed to by a blue arrow from the text "Character encoding for the HTML document". Also in the head is a `<title>Khmer Culture</title>` tag, pointed to by a blue arrow from the text "Title displayed on browser bar". Below the head, the `<body>` section is enclosed in an orange bracket and labeled "BODY". The body contains an `<h1>Exploring Khmer Culture</h1>` tag and a `<p>` tag with the text "The Khmer culture, originating from Cambodia, is rich in history". The document ends with the `</html>` closing tag.

```
<!DOCTYPE html>
<html lang="en">

  <head>
    <meta charset="UTF-8" />
    <title>Khmer Culture</title>
  </head>

  <body>
    <h1>Exploring Khmer Culture</h1>
    <p>
      The Khmer culture, originating from Cambodia, is rich in history
    </p>
  </body>

</html>
```

HTML Nested Elements

- ✓ HTML elements **can contain other elements**.
- ✓ A HTML document consist of nested HTML elements
- ✓ The root of a HTML element is the `<html>` node

```
<html>
  <head>
    <title>Musings</title>
  </head>
  <body>
    <p>
      To quote Buckaroo,
      <q>The only reason
      for time is so
      that everything
      doesn't happen
      at once.</q>
    </p>
  </body>
</html>
```

An HTML document is a Tree-based structure of HTML elements

5 MIN

Activity 1

✓ Draw **HTML elements tree** form given code !

```
<html>
  <body>
    <h1>CADT Generations</h1>
    <img />

    <h2>Generation 10</h2>
    <p>254 students registered</p>

    <h2>Generation 09</h2>
    <p>198 students registered</p>

  </body>
</html>
```

HTML

Headings Elements

- ✓ HTML define six tags for different heading sizes.

`<h1>Heading 1</h1>` - (Most Important)

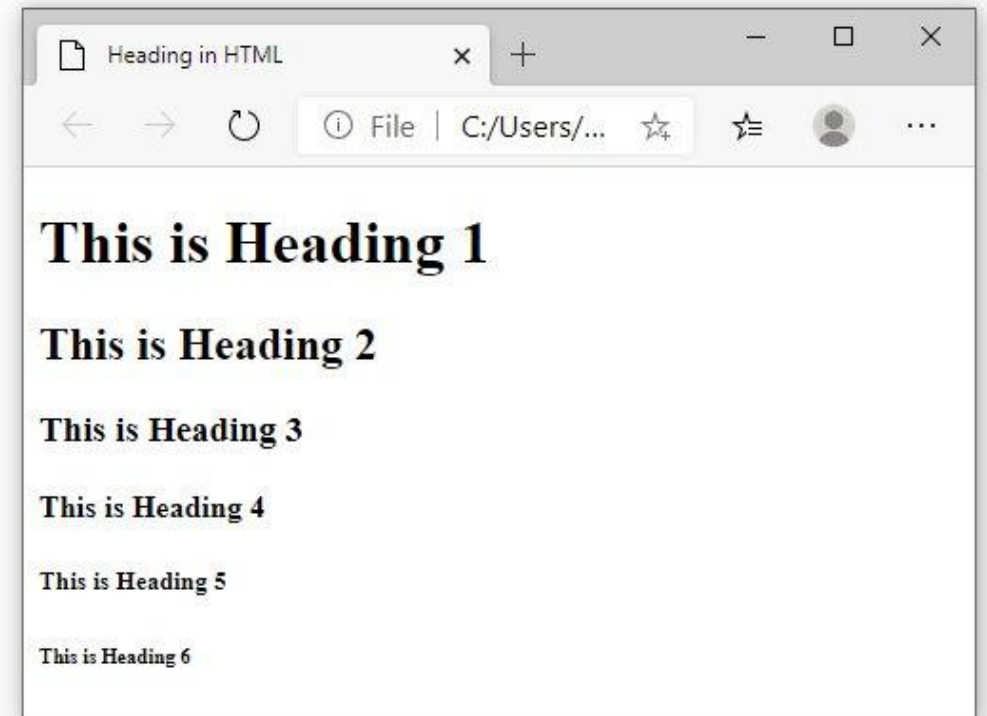

`<h2>Heading 2</h2>`

`<h3>Heading 3</h3>`

`<h4>Heading 4</h4>`

`<h5>Heading 5</h5>`

`<h6>Heading 6</h6>` - (Least Important)

Lists Elements

Unordered List

```
<ul>  
  <li>Coffee</li>  
  <li>Tea</li>  
  <li>Milk</li>  
</ul>
```

- Coffee
- Tea
- Milk

Ordered List

```
<ol>  
  <li>Coffee</li>  
  <li>Tea</li>  
  <li>Milk</li>  
</ol>
```

1. Coffee
2. Tea
3. Milk

HTML Elements **attributes**

✓ HTML elements can also have **attributes**

```
<ul type = 'square' >
```

Attribute

Value

- Iron Man
- Thor
- Spider-Man

5 MIN

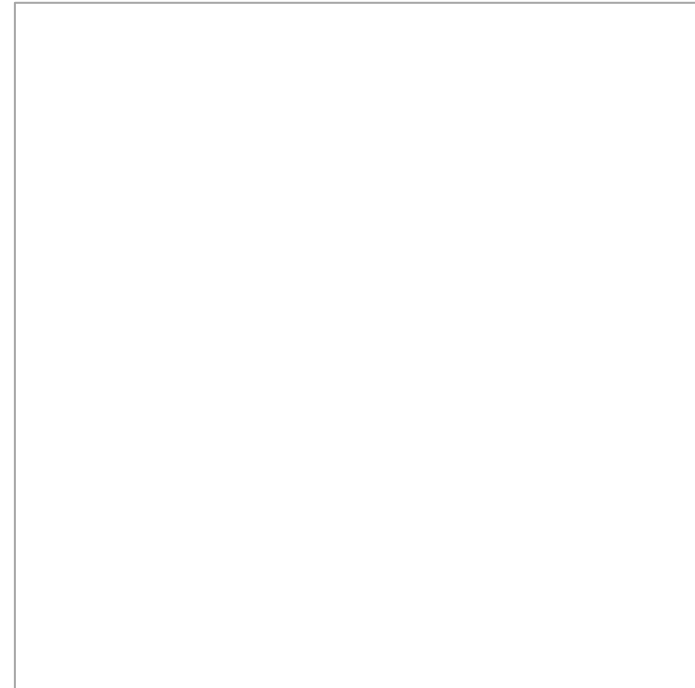

Activity 2

✓ Write the **rendering** of this HTML code

```
<ol>
  <li>Marvel
    <ul type='circle'>
      <li>The Avengers
        <ul type='square'>
          <li>Iron Man</li>
          <li>Thor</li>
          <li>Spider-Man</li>
        </ul>
      </li>
    </ul>
  </li>
</ol>
```

10 MIN

Activity 3

✓ Write a **basic HTML page**

- Add a page title
- Add an **unordered list** of your favorite books
- Add an **ordered list** of steps to do in the morning.

```
<!DOCTYPE html>
<html>
  <head>
    <title>
      <!-- 1 - Define the page title -->
    </title>
  </head>

  <body>
    <!-- 2 - Add 2 lists : an ordered and unordered list-->
  </body>
</html>
```

You can start from the provided start code

Anchor Element

Anchor tags are elements used to create **hyperlinks** in webpages

Element Attribute	Definition
Href	target for the anchor element

Absolute/Relative paths

Absolute path

An absolute path is a full URL or file path **starting from the root**: the root drive or the protocol name

```
<a href="https://en.wikipedia.org/wiki/Culture_of_Cambodia">Cambodian culture</a>
```

```

```

Relative path

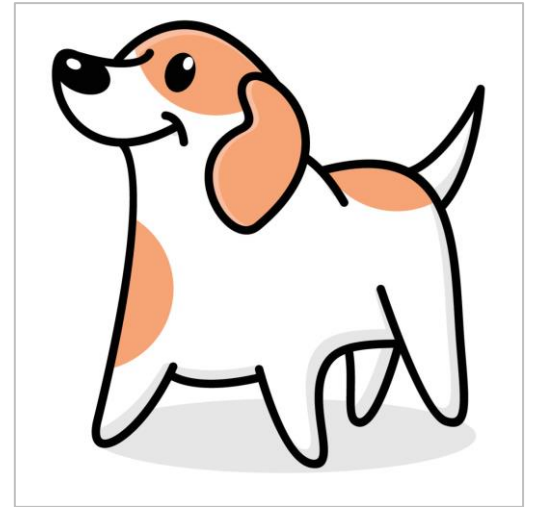

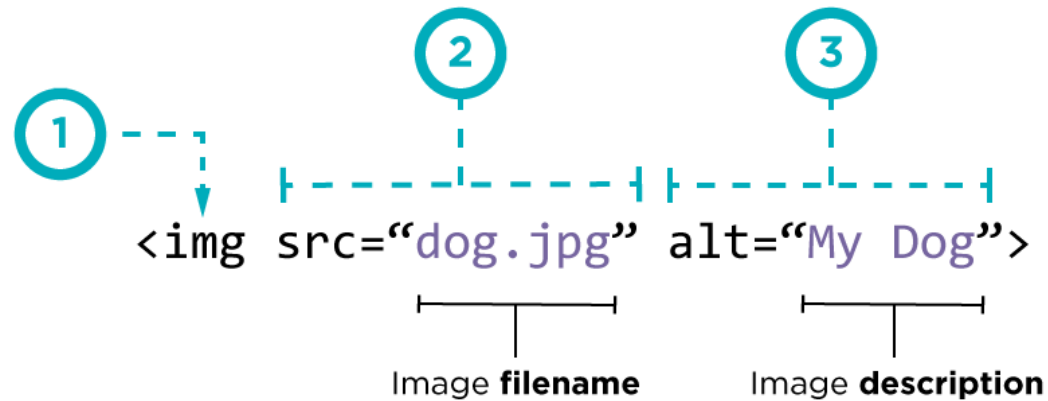

A relative path is a partial path that starts **from the current directory**, not the root, and navigates to a file or resource.

```

```

Image Elements

- ✓ The image tag allows you to add images to your page
- ✓ Note : the image tag doesn't require a closing tag

Element Attribute	Definition
src	Image path
alt	Image description

What we have learnt today

- ✓ Understand **HTML** syntax
- ✓ Identify the purpose of
 - `<!DOCTYPE html>`
 - `<head>`
 - `<body>`
- ✓ Manipulate **basic HTML tags**:
 - P, H1, UL, OL, A, IMG
- ✓ Differentiate **absolute** and **relative** paths

Tag Name	Opening Tag	Closing Tag
HTML	<code><html></code>	<code></html></code>
Head	<code><head></code>	<code></head></code>
Title	<code><title></code>	<code></title></code>
Body	<code><body></code>	<code></body></code>
Heading 1 to Heading 6	<code><h1></code> to <code><h6></code>	<code></h1></code> to <code></h6></code>
Paragraph	<code><p></code>	<code></p></code>
Anchor	<code><a></code>	<code></code>
Image	<code></code>	-
Unordered List	<code></code>	<code></code>
Ordered List	<code></code>	<code></code>
List Item	<code></code>	<code></code>

The Basic HTML tags

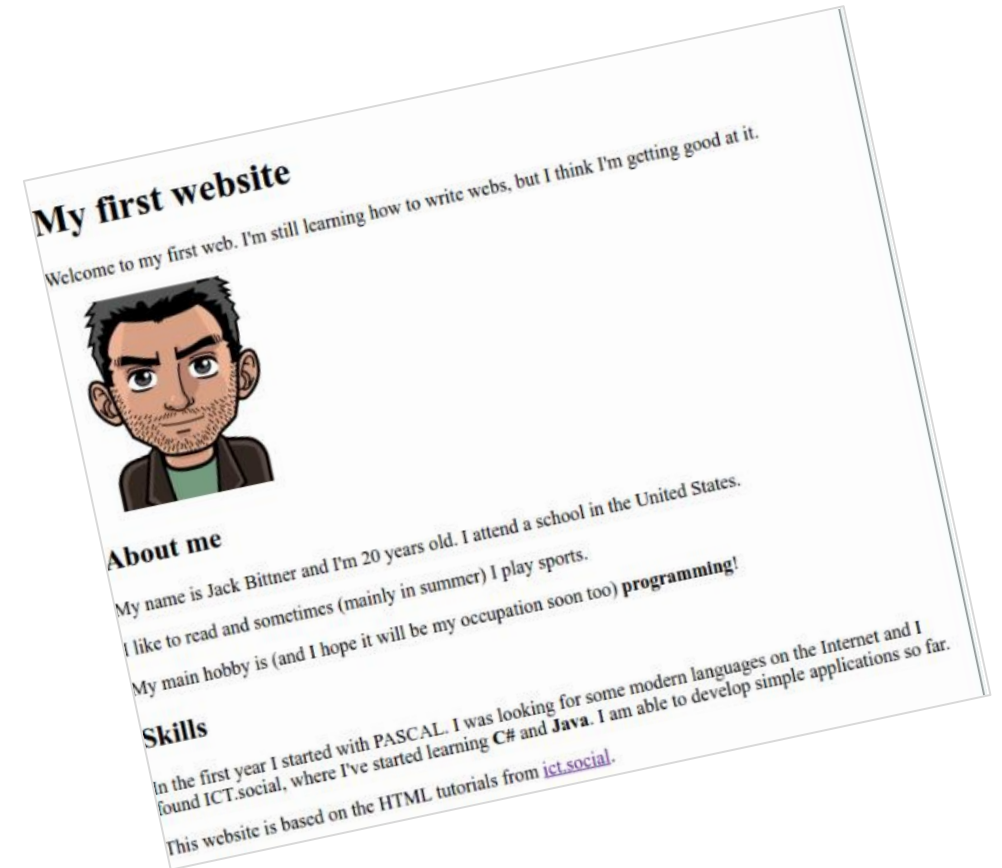

For next session

We want you to create your first **web page**

Your page should include:

- Headings and subheadings
- Paragraphs
- An unordered list
- An ordered list
- Links to an external and an internal page
- An image

Be creative !!

We will review your work during the next session
